1 Exercice 2: Part 1

2 Import the necessary libraries and open the data set

```
import pandas as pd
import numpy as np
from sklearn.tree import DecisionTreeClassifier
from sklearn.ensemble import RandomForestClassifier
from sklearn.cross_validation import train_test_split, ShuffleSplit, cross_val_score
from sklearn import preprocessing
import matplotlib.pyplot as plt
import plotly.plotly as py
import plotly.graph_objs as go

data_set = pd.read_csv('train.tsv', sep='^')
good = data_set[data_set.Label== 1]
bad = data_set[data_set.Label ==2]
```

3 Function to Create Qualitive Plots

```
In [11]: def QualitivePlot(data_set, No):
    string = "Attribute"+No.__str__()
    attr1 = pd.crosstab(index=data_set[string], columns=data_set['Label'])
    attr1.plot(kind='bar', figsize=(8,8))
    plt.show()
```

4 Function to Create Numerical Plots

```
In [12]: def NumericalPlot(good, bad, Num, tit, ylab):
    Attribute = "Attribute"+Num.__str__()
    df = pd.DataFrame({'Good': good[Attribute], 'Bad':bad[Attribute] }, columns=['Good', 'Bad'])
    df.plot.box()
    plt.title(Attribute + tit)
    plt.ylabel(ylab)
    plt.show()
```

5 Call of the Function to Create all the Qualitive Plots

```
In [13]: qualitativeList = [1,3,4,6,7,9,10,12,14,15,17,19,20]
    for x in qualitativeList:
        QualitivePlot(data_set, x)
```

6 Call of the Function to Create all the Numerical Plots

```
In [14]: numericalList = [2,5,8,11,13,16,18]
         title = ": Box Plot for Good-Bad"
         ylab = ['Duration in month', 'Credit amount', 'Installment rate in percentage of disposable income',
                  'Age in years', 'Number of existing credits at this bank', 'Number of people being liable for a loan']

         for x in range(0, len(numericalList)):
             NumericalPlot(good, bad, numericalList[x], title, ylab[x])
```
